Reasons for Allowance

The following is an examiner's statement of reasons for allowance: This application is a divisional of US Patent 6,010,772 wherein a restriction was conducted early in the prosecution of US Patent 6,010,772 between an intermediate and final product wherein the final product was patented. The prior art, Perdomi et al. discloses a packaging container (col. 1 line 20) comprising a laminated film comprising as a surface layer 90% or more by weight of the mixture of propylene/alpha olefin copolymer (A) (col. 3 lines 42-48) and a propylene/alpha olefin copolymer (B) (col. 3 lines 49-55) having an alpha olefin content different from that of copolymer (A) (col. 3 line 53). Perdomi et al. fail to suggest or teach wherein propylene/alpha olefin copolymer (A) has an alpha olefin content of 5-20% mole and a difference in melting point of copolymer (A) and (B) or (A) and (C) of at least 5 degrees Celsius. Specification page 6 line 16-18 states that if the difference in melting point is smaller than 5 degrees Celsius, that it is difficult to selectively form a strong heat welded portion or weak heat welded portion. Furthermore, on page 7 line 7-10, the specification states that if the alpha olefin content of propylene/alpha-olefin copolymer (A) is higher than 20 mol%, not only are the heat resistance and transparency decreased but also, the peel strength increase when easily peelable partition walls are prepared, so that it is difficult to release the partition walls by hand.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
